### **INTRODUCTION**

In accordance with your request, we have performed structural observations and testing during roof structure repairs at the subject site. The project included welding and bolting repairs for the roof structures of two existing approximate 50,000 square foot concrete tiltup buildings. Our observations and testing were performed between April 25 and May 17, 2002.

### **WELDING OBSERVATION**

Prior to initiation of welding operations we verified that the welders were certified and the welding materials and welding procedures were suitable for the work being performed. During the actual work, we made periodic visits to the site to verify that the contractor continued to use/apply these same welders, materials, and procedures. Upon completion of welding, we observed the work for conformance to the project drawings and provisions of the American Welding Society Structural Welding Code. Materials and workmanship appeared to comply with these documents.

### **HIGH STRENGTH BOLTING OBSERVATION AND TESTING**

Prior to high strength bolt tightening operations, procedures were established in accordance with AISC "Delayed Verification Method" to obtain proper tensioning of high strength bolts for the roof's frame. A sample lot of the high strength bolts used on the project were tested in a tension-measuring device. These bolts achieved or exceeded the minimum required pretension. Subsequently, torque wrench's were calibrated and high strength bolts tested for proper tension. Any bolts found not meeting the specification were tightened. Our observations and testing indicate that the high strength bolts were tensioned in accord with industry standards and the project plans.

### AIRCRAFT CABLE OBSERVATION

Our representative observed installation of aircraft cables used for diagonal bracing of the roof's frame. Aircraft cables were installed as designated on the project plans and were tightened. Our observations indicate that the aircraft cables were installed in accord with the project plans.

### STEEL PIN OBSERVATION

Our representative observed the installation of powder-actuated steel pins used for attachment of perimeter roof channels to the concrete wall panels. Our observations indicate that the installation appeared to be in conformance with the project drawings and the applicable ICBO report.

### LIMITATIONS

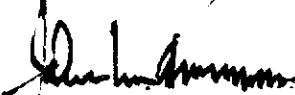

Horizontal and vertical limits of the described work were determined by others. We cannot guarantee construction, nor should our work or this letter be construed as relieving the contractors from their primary responsibility to conform to contractual agreements and sound engineering practice.

Should you have any questions regarding this letter or require any further information, please contact our office.

Very truly yours,
