Subject: Item #30 on Consent calendar for April 23, 2019

Dear Mayor, and Council Members:

We are asking that Item#30 be pulled from the Consent Calendar/ April 23, 2019 City Council Meeting.

There are many questions that remain unanswered about the "solution/s" that this project might accomplish. eg. in the FEIR it states that this 6 Million gallon vault will not prevent surface water flooding in a 10 year/6 hour storm (Per DEIR sect. 3.1.1). In fact roughly 6.8 Million gallons of sewer water that is contaminated with sewage would still remain on the streets. This is more sewage water flooding into our streets than the volume of water that is stored in the vault, approximately 5.6 million gallons.

There remain open law suits against the Proposed Sewer Vault being placed in Historic McKinley Park.

Why pour \$35 Million down the drain for this vault? The vault doesn't solve flooding in this area. Some neighborhood residents were falsely led to believe their flooding worries would be solved with this vault. The City of Sacramento has paid more than \$250,000 to the Crocker & Crocker PR firm to help convince the neighborhood that they and their properties will be protected from surface flooding. This is incorrect information.

The Combined Sewerage System is antiquated. It has been recommended to the City of Sacramento for more than 50 years, that a permanent solution is to replace the obsolete aged system with a Split System. Sooner or later this aging infrastructure will have to be replaced. Let's stop delaying the solution and become the world class city that Sacramento can become. Sacramento needs separated sewage infrastructure to support the intense developments throughout the city.

Item #30 remains too controversial and needs to be pulled from the consent calendar for further study, questioning, and answers. Please, pull Item #30 for tomorrow night's City Council meeting.

Respectfully submitted,

Will Green, MD for Concerned Citizens for a Sewer-Free McKinley Park
