Subject: Lightweight Tile Re-roof
2416 39th Avenue
Sacramento, CA. 95822

Dear David,

Pursuant to your request, Anderson Engineering Consultants has reviewed the roof framing of the structure at the above address for structural adequacy. The house is single story, approximately 35 years old, and is conventionally framed. The roof is comprised of the following:

- Single 2x4 rafters at 24" o.c. with a 7'-8" maximum span.
- 2x4 and 2x6 purlins with 2x4 struts at 4' o.c. brace the rafters, see attached drawing.
- 2x6 hip and valley boards.

The manufacturer has developed a span table to determine the maximum span of the rafter. The table was prepared by a licensed Engineer and is based on the current Uniform Building Code. The span table indicates the following for the given condition:

- Single 2x4 rafters at 24" o.c. - 8'-4".

The roof has a pitch of 4:12 and appears to be in sound condition. 2x4 and 2x6 purlins support the rafters at approximately mid-span and are braced adequately to bearing members. The hip and boards are 2x6's and braced adequately to bearing members. The total dead load on the rafters including roofing material does not exceed 9 psf.

This set of plans and specifications must be kept on the job at all times and it is unlawful to make any changes or alterations from the same without written permission from the Building Inspection Division.

The approval of this plan and specification SHALL NOT be held to permit or approve the violation of any City Ordinance or State Law.

It is our opinion that using your proposed re-roof system consisting of the following will not compromise the structural integrity of the roof system:

- 7/8" - 22 gage hat channel fastened to the rafters with 10d galvanized nails (or equal) at 24" o.c.
- "Thermo-ply" underlayment fastened to the hat channel with #8 self-tapping screws (or equal).
- 7/8" - 22 gage steel hat channel battens over the "Thermo-ply" underlayment fastened with #8 self tapping screws (or equal) at every rafter.
- Lightweight concrete tile weighing less than 7.0 psf.

The determination of the roof's structural integrity is based on observation and known mechanical properties of wood.

After re-roofing minor cracking of the ceiling and interior and exterior walls may occur. In addition, a small amount of deflection in the rafters may be observed. These conditions are cosmetic only and do not affect the structural integrity of the roof framing.

Should you have any questions, please do not hesitate to contact us.

Sincerely,

Carl Anderson, P.E.
