Re: Blown Out Sill Plate: Plan 4265, Lot 57 – Northpointe @ Natomas Subdivision
O'Connor Freeman Job Number: E001001

Chris:

You contacted our office concerning a problem with the sill plate on Plan 4265, Lot 57 of the Northpointe @ Natomas project. Specifically, you informed our office that the sill plate along the 15'-9" type 'B' shearwall at the garage to house wall had 32" of missing sill plate. The reason for the missing sill plate is because the plumbing pipes are coming up at this point and the sill plate had to be removed to allow a connection into the house. You also informed our office that you are not able to put any blocking, where the sill plate is missing, on the foundation to align with the existing sill plate. The lowest point that a line of continuous blocking can be put is 24" from the foundation. We have reviewed this situation and have determined that a continuous line of blocking should be placed 24" from the top of the slab and strapped with a CS16 strap. The CS16 strap should also extend 3 bays past each side of the blown out sill plate.

If you should have any further questions or comments please do not hesitate to call.

Sincerely,

O'Connor Freeman & Associates, Inc.
