RE: Simpson HPAHD22-2P Holdowns with reduced side cover (spalling)
All Plans - Heritage (#20028)

To whom it may concern:

This letter is to verify that for the plans stated above, Simpson HPAHD22-2P Holdowns have been checked for reduced load capacity due to spalling below the embedment line specified on the strap. See the following for clarification:

If spalling is 0 to 1" below embedment line:

- Simpson does not require a reduction in uplift capacity.

If spalling is more than 1" and less than or equal to 4" below embedment line:

- Simpson requires a 10% reduction in uplift capacity.

If spalling is more than 4" below embedment line:

- Simpson classifies this to be a mis-installation. In this case a Simpson HTT22 with a 5/8" diameter threaded rod having 10" of embedment and installed using the Simpson SET Epoxy System would be an acceptable alternative.

Based on the first and second criteria shown above, all HPAHD22-2P uplift calculations were checked for having a 10% load reduction. For all the locations checked, the load reduction was not enough to compromise the design.

If I can be of further assistance, please call me.
