Re: John Laing Homes

All Plans

Dear Sir or Madam:

The following issues have been brought to my attention.

1. Where slab ties have been used to connect the first pour footing to the slab pour, anchor bolts need only be embedded 7" from the top of the slab.
2. Slab ties need only extend 24" into slab for this project.
3. A 1" layer of sand is acceptable for the layer between the vapor barrier and the slab.
4. Wall top plates are not to have lap splice nailing on each side of intersecting walls. If chord force transfer is a consideration, provide edge nailing to both plates at shear walls or nail chords together at shear walls using the 16d nailing schedule given in the shear wall schedule.

Sincerely,

Richard M. Robertson, P.E.

Re: John Laing Homes - Calypso
All Plans

Dear Sir or Madam:

The concrete spall located beneath the center of a P3 shear wall does not compromise the integrity of the shearwall provided that the spall does not occur near any ho/downs or within 3" of any anchor bolts.

Sincerely,

Richard M. Robertson, P.E.
