

SACRAMENTO CITY PLANNING COMMISSION

March 9, 1965

City Planning Commission  
City of Sacramento

MEMBERS IN SESSION:

The recent announcement by Sacramento Municipal Utility District regarding their underground utility distribution system for the future is of the greatest significance in the local area in reference to urban aesthetics. In fact, we believe it is of national significance in the field of urban problems.

There is a national awakening to the problem of our visual environment. We have done an excellent job of making a once wealthy country in terms of scenic assets into a jungle of unappealing urban scenery. The fight to change the picture is just beginning, and this Commission should not allow this noteworthy effort on the part of the District Board to make a community-wide contribution to this fight go unnoticed.

It is our opinion that the Commission should take action commending the District Directors for their extreme sensitivity to the problem and for their aesthetic vision.

Let's hope other organizations follow suit in other ways.

Respectfully submitted,

  
R. L. RATHFON  
Planning Director
