APPLICATION FOR PERMIT TO BUILD

34 R
39

Street No. 1945 Stockton Blvd. Lot 1st Frac. T102 OATS T. Block 39 Stockton S.

Owner Shell Co. of Calif. Address 1945 Stockton Blvd.

Architect Address

Contractor D. Hall Address

Kind of Building

Foundation

Posts Girder Span Mud Sills

1st Floor 2nd Floor 3rd Floor 4th Floor 5th Floor 6th Floor

Joints	1st Floor	2nd Floor	3rd Floor	4th Floor	5th Floor	6th Floor
Max. Span						
Bearing Partitions		inset interior partitions				
Non Bearing Partitions						
Story Height		office bldg.				
Outside Walls		//				

Ceiling Joists Span No Water

Roof Rafters

Water Heater Chimney

Size of Building—Length Width Height

Permit
9357
Date
10/22/50
District
152

It is hereby agreed that this building will be constructed in conformity with the Ordinances of the City of Sacramento and the Laws of the State of California.

ESTIMATED COST, \$ 300,000

Plans must be submitted

Shell Co of California
J. Williams

OWNER OR OWNER'S REPRESENTATIVE.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. For example, a manager might notice that sales are declining or that customer satisfaction is low. Once a problem is identified, the next step is to define it clearly and specifically. This involves determining the scope of the problem, its causes, and its effects. A clear definition of the problem is essential for developing an effective solution.

2. The second step in the process is to analyze the problem. This involves gathering information about the problem and its context. This information can be obtained through a variety of methods, including interviews, surveys, and data analysis. The goal of this step is to understand the underlying causes of the problem and to identify the factors that are contributing to it. This information is then used to develop a plan of action.

3. The third step in the process is to develop a plan of action. This involves identifying the specific steps that need to be taken to solve the problem. The plan should be realistic and achievable, and it should take into account the resources available and the time constraints. Once the plan is developed, the next step is to implement it. This involves putting the plan into action and monitoring progress.

4. The fourth step in the process is to implement the plan. This involves putting the plan into action and monitoring progress. It is important to track the results of the plan and to make adjustments as needed. This step is often the most challenging, as it requires the implementation of change and the management of resistance.

5. The fifth and final step in the process is to evaluate the results. This involves comparing the actual results with the desired state and determining whether the problem has been solved. If the problem has not been solved, the process may need to be repeated. Evaluation is an important part of the process, as it allows the manager to learn from the experience and to improve the process for the future.
