or by circular hoop reinforcement or by Formula (21-4) in Section 1921A.4.4.1 for rectangular hoop reinforcement).

1809A.5.2.3 Prestressed concrete piles. Piles shall have a minimum volumetric ratio of spiral reinforcement no less than 0.021 for 14-inch (356 mm) square and smaller piles, and 0.012 for 24-inch (610 mm) square and larger piles unless a smaller value can be justified by rational analysis. Interpolation may be used between the specified ratios for intermediate sizes.

1809A.6 Inspection of Piles. The installation of piles shall be continuously observed by a qualified representative of the geotechnical engineer responsible for that portion of the project. The representative of the geotechnical engineer shall be examined by the enforcement agency to determine his/her knowledge and experience in pile-driving operations. The enforcement agency shall approve or reject the representative based on this examination and his/her qualification record.

The representative of the geotechnical engineer shall make a report of the pile-driving operation giving such pertinent data as the physical characteristics of the pile-driving equipment, identifying marks for each pile, the total depth of embedment for each pile, and when the allowable pile loads are determined by a dynamic load formula, the design formula used, and the permanent penetration under the last 10 blows. One copy of the report shall be sent to the enforcement agency.

1809A.7 Inspection of Caissons.

1809A.7.1 Cast-in-place belled caissons. The provisions of Section 1808A.2 shall apply to belled caissons. The belled base of each pier shall be inspected by a qualified representative of the geotechnical engineer to verify the bell size and foundation soil classification. The sloped sides of the belled bases shall be limited to a slope of 2 units vertical to 1 unit horizontal (200% slope) unless reinforced as for a concrete spread footing.

5. Clay, sandy clay, silty clay and clayey silt (CL, ML, MH and CH)	1,000 ⁶	100		130

¹For soil classifications OL, OH and PT (i.e. organic clays and peat), a foundation investigation shall be required.
²All values of allowable foundation pressure are for footings having a minimum width of 12 inches (305 mm) and a minimum depth of 12 inches (305 mm) into natural grade. Except as in Footnote 7, an increase of 20 percent shall be allowed for each additional foot (305 mm) of width or depth to a maximum value of three times the designated value. Additionally, an increase of one-third shall be permitted when considering load combinations, including wind or earthquake loads, as permitted by Section 1612A.3.2.
³May be increased the amount of the designated value for each additional foot (305 mm) of depth to a maximum of 15 times the designated value. Isolated piles for uses such as flagpoles or signs and poles used to support buildings that are not adversely affected by a 1/2-inch (12.7 mm) motion at ground surface due to short-term lateral loads may be designed using lateral bearing values equal to two times the tabulated values.
⁴Lateral bearing and lateral sliding resistance may be combined.
⁵Coefficient to be multiplied by the dead load.
⁶Lateral sliding resistance value to be multiplied by the contact area. In no case shall the lateral sliding resistance exceed one-half the dead load.
⁷No increase for width is allowed.
