Estimated Cost, \$ 75,000  
 Plans must be submitted

A C Moore  
 Owner or Owner's Representative.

1. The first step in the process of identifying a problem is to define the problem clearly. This involves identifying the symptoms and the underlying causes of the problem. It is important to gather as much information as possible about the problem and to consider all possible causes. Once the problem has been defined, the next step is to develop a plan of action. This involves identifying the goals of the plan and the steps that need to be taken to achieve those goals. It is important to consider the resources available and the potential risks of the plan. Once a plan has been developed, the next step is to implement the plan. This involves putting the plan into action and monitoring the progress. It is important to be flexible and to be prepared to make adjustments if necessary. Finally, the last step in the process is to evaluate the results. This involves comparing the actual results with the expected results and identifying any areas for improvement. It is important to document the results and to share them with others who may be affected by the problem.
