SUBJECT: Reroof at 6711 Riptide Way, Sacramento, CA 95831

Dear Calvin:

On May 14th 1999 I inspected the roof structure of your residence at the above mentioned address. The roof was made up of 2x6 Douglas fir No.2 rafters @ 2' o.c. with a max. span of 10'-3" in the garage and 11'-6" in the attic areas of the house. There was a vaulted area in the family room that had 2x6 rafters at 2' o.c. spanning 7'-6" with a rough 6x14 ridge beam spanning 19'. There were 4x12 porch beams in the back porch spanning 10'-6" and 4x12 porch beams in the front spanning about 10'.

It is my finding that this structure is adequate for the following : 1/2" plywood or OSB installed over the existing skip sheathing; 30lb. tarred felt; 1x2 batts; Lightweight concrete tile weighing 7.3 lbs./sq.ft.

NOTE: it is possible when reroofing that the increased load to structural elements also supporting wall, ceiling and floor finishes could cause some minor cosmetic cracking of these finishes. This is typical of wood framed structures and does not of itself indicate structural inadequacy of these members.

This report deals with the structural adequacy of roof supporting members that were readily observable. It does not address any structure that was covered by wall finishes, buried in the ground or was otherwise not observable. Any such structures were assumed to conform to standard construction specifications in the Uniform Building Code. Also, it does not address any existing deflection or warping of roof surfaces, nor is it guaranteed that any structural modifications that may be listed in this report will remove such deflections or warping. The repair of such deflections or warping to improve architectural appearance is at the option of the building owner and the roofing contractor.

I would like to thank you for allowing me to provide my services in this matter. Please let me know if I may be of further assistance.

Sincerely,

Mark S. Schoen P.E.
