Dear David,

Pursuant to your request, Anderson Engineering Consultants has reviewed the roof framing of the structure at the above address for structural adequacy. The roof is comprised of 2x8 rafters at 16" o.c. and 24" o.c. over the living and sleeping areas. The pitch is 4:12. The maximum span between bearing wall and purlin is 10'-8" and 14'-4", respectively, which is less than the manufacturer's span table lengths of 17'-5" and 15'-3", respectively. 2x6 purlins support the 2x8 rafters at 24" o.c. at approximately two-thirds span and are braced adequately to bearing members. The kitchen area has 2x6 rafters at 24" o.c. that span 8'-0" which is less than the span table length of 12'-1". The roof is in sound condition.

It is our opinion that the structural integrity of the roof system will not be compromised by using your proposed reroof system of 7/8" - 22 gage hat channel fastened to the rafters with 16d galvanized nails (or equal) at 24" o.c., "Thermo-ply" underlayment fastened to the hat channel with #8 self tapping screws (or equal), 7/8" - 22 gage steel hat channel battens over the "Thermo-ply" underlayment fastened with #8 self tapping screws (or equal) at every rafter, and lightweight Eaglelite tile weighing 7.0 psf. The total dead load on the rafters does not exceed 8 psf.

Should you have any questions, please do not hesitate to contact us.

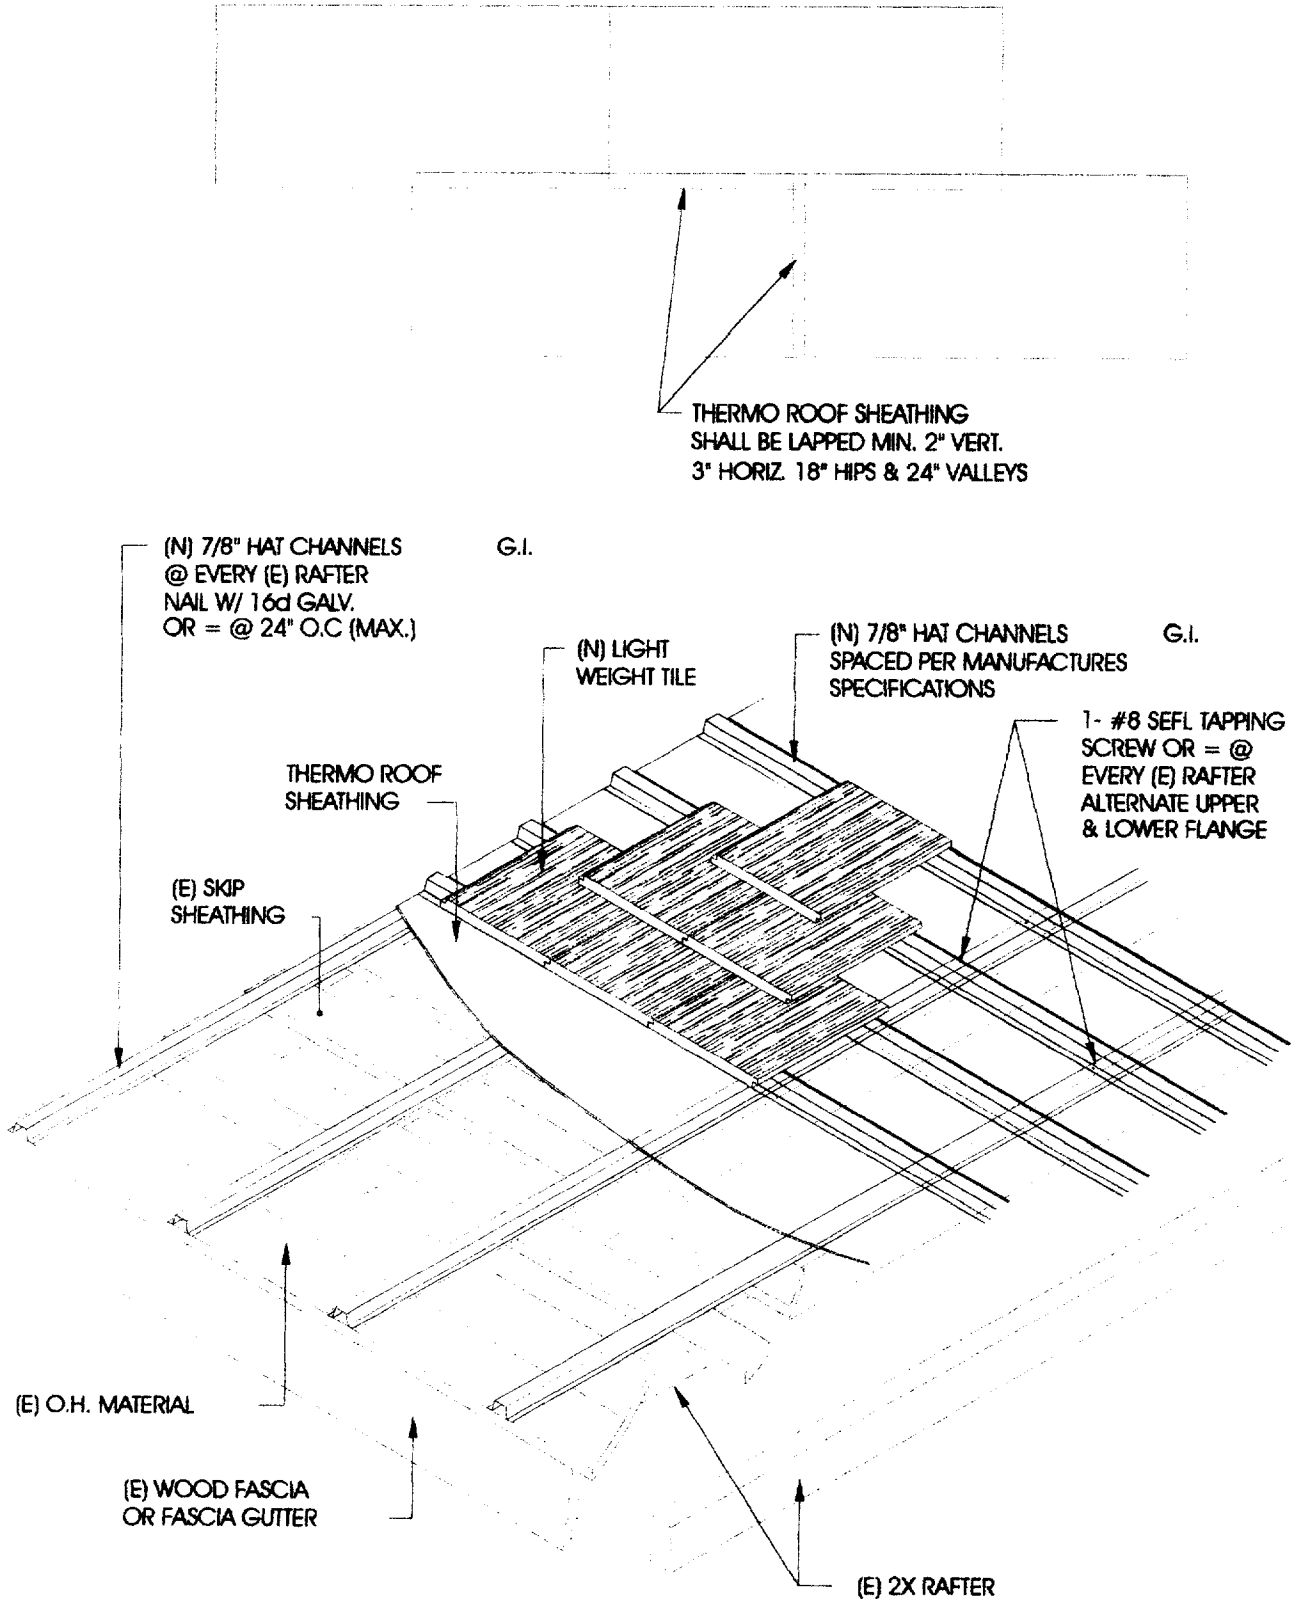

Sincerely,

Carl Anderson, P.E.
