Subject: Structural Roof Inspection  
637 Brickyard Drive  
Sacramento, CA. 95831

Dear David,

Pursuant to your request, Anderson Engineering Consultants performed a visual structural inspection at the subject site on July 20, 1998. The roof structure is comprised of 2x8 rafters at 16" o.c. at a 5:12 pitch over the living / dining portion. The maximum span is 14'-10" which is less than the manufacturer's span table length of 17'-5" for this condition. The remainder of the house has 2x6 rafters at 24" o.c.. The maximum span is 11'-0" which is less than the span table length of 12'-1" for this condition. 2x6 purlins support the 2x6 rafters at approximately mid-span. The hip boards are 2x8 and braced adequately. The roof structure was found to be in sound condition.

It is our opinion, based on the site inspection, that the structural integrity of the roof system will not be compromised by using your proposed reroof system of 7/8" - 22 gage hat channel fastened to the rafters, "Thermo-ply" underlayment fastened to the hat channel with screws, 7/8" - 22 gage steel hat channel battens over the "Thermo-ply" underlayment fastened with screws, and lightweight Eaglelite tile weighing 7.0 psf. The total dead load is 10 psf.

Should you have any questions, please do not hesitate to contact us.

Sincerely,

Carl Anderson, P.E.
