*Slab/Reinforcement*  
**GATEWAY WEST (MEMORIES)**

WKA No. 3895.15

Our geotechnical engineering report for the subject subdivision (WKA No. 3895.05, dated September 8, 1998) recommends minimum interior slab-on-grade reinforcement consisting of 6 x 6/W2.9 x W2.9 welded wire fabric or No. 4 rebar at 18-inch center each way. Welded wire fabric provides crack control and the heavier gage wire is recommended based on our experience that it is easier to control the location of the reinforcement in the slab. The lighter gage wire (6 x 6/W1.4 x W1.4) is more difficult to achieve proper location (vertically) in the slab. However, if properly located, it can provide the desired crack control, although this is highly dependent on the experience and care of the concrete contractor. *OK @ 09/14/00*

Due to concerns over proper location of the reinforcement in the slab, we recommend that the 6 x 6/W2.9 x W2.9 welded wire be used on future house slabs constructed in the subdivision. *In future homes @ 9/14/00*

**Re: Memories (Job #99112)  
Slab Reinforcement**

To Whom It May Concern:

This letter is to clarify that the 6x6/10x10 or 6x6/W1.4xW1.4 wire mesh is adequate if installed properly. The letter from Wallace Kuhl states that on future pours 6x6/W2.9xW2.9 wire mesh should be used to help insure proper placement in the slab. The wire mesh should be installed in the middle of the slab and is used for crack control only.

If you have any questions, please contact Rob Coon.

RE: Memories II – All Lots

Dear Mr. Buchberger:

Due to the current weather conditions and existing ground conditions, Beazer Homes is requesting a building final without established grade, landscape, or fencing on the above-referenced project.

We fully understand that within sixty days from final we will have all of the above conditions established. Beazer Homes will also make the homeowner completely aware of the above conditions.

Thank you for your cooperation.
