# *Rayco Electric, Inc.*

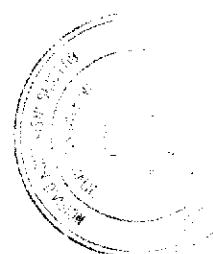

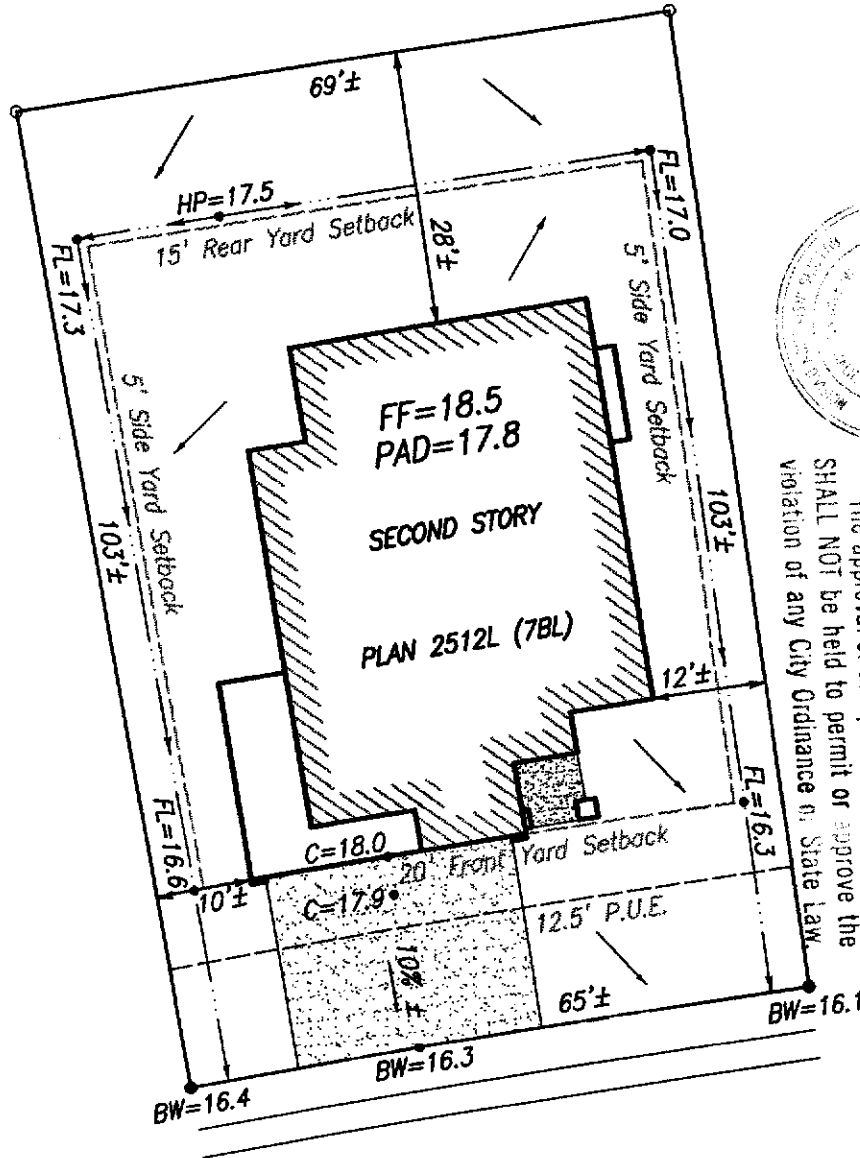

When the model homes were originally wired, we set certain circuits on a motions sensor designed to turn on all the lights in the house. We wired these circuits to a pull can near the panel. In this pull can we had the contactor controlled by the motion sensor and a time clock for the circuit that controlled the exterior lights. To convert the model homes to normal operation and eliminate the motion sensor and time clock we removed the clock and contactors. We left the pull can and used this as a splice box to feed through the home runs. To remove this pull can we would have to replace the home runs for all the lighting circuits for the whole house, it would be unreasonable to tear out the sheet rock and repull homeruns throughout the house.

We have a NEMA 3R 12 x 12 x 4 pull can with approximately 5 #12 conductors and 25 # 14 conductors.
