 This design is for an individual building component. It has been based on specifications provided by the component manufacturer and does not take into account the current versions of TPI and APFA design standards. No responsibility is assumed for dimensional accuracy. Dimensions are to be verified by the component manufacturer and/or building designer prior to fabrication. The building designer shall ascertain that the loads utilized on this design meet or exceed the loading imposed by the local building code. It is assumed that the top chord is laterally braced by the roof or floor sheathing and the bottom chord is laterally braced by a rigid sheathing material directly attached, unless otherwise noted. Bracing shown is for lateral support of component members only to reduce buckling length. This component shall not be placed in any environment that will cause the moisture content of the wood exceed 19% and/or cause connector plate corrosion. Fabricate, handle, install and brace this truss in accordance with the following standards: TRUSSCOM MANUAL, by Truswal, QUALITY CONTROL STANDARD FORMETAL PLATE CONNECTED WOOD TRUSSES - (HIB-91) and HIB-91 SUMMARY (QST-89), HANDLING INSTALLING AND BRACING METAL PLATE CONNECTED WOOD TRUSSES - (HIB-91) and HIB-91 SUMMARY.
