Amana
Heating & Air Conditioning

TO: All Amana Heating & Air Conditioning Distributor Principals and Branch Managers

SUBJECT: Changes in Remote A/C and Heat Pump Clearance Requirements

The clearance requirements for all Amana remote condensing and heat pump units have been changed. There have been requests from the field to reevaluate the restrictions that are listed on the installation instructions and service manuals. Engineering has concluded their testing, and we are pleased to announce that the minimum clearance requirements have been decreased. These new clearances will provide the installer with additional flexibility without compromising performance or reliability. The new installation instructions will read as follows:

Minimum clearances are required to avoid air recirculation and keep the unit operating at peak efficiency. A minimum six-inch clearance is required on one side of the unit, and a minimum of twelve on two other sides. The remaining side of the unit must be unrestricted. Ensure that there is at least five feet clearance above the unit. These minimum clearances do not guarantee adequate service access. Sufficient clearances for servicing the unit(s) must be provided.

If installing two or more units at the same location, allow at least 24 inches between the units when using the 6"-12"-12" guidelines in Figure 1. The space between two units may be reduced to 12" if the clearances in Figure 1 are increased to 12"-24"-24"
