

APPLICATION FOR PERMIT TO BUILD

35 R
36

Street No. 1881 Stockton Lot 12 Block 36

Owner Roberts & Brown Address 509 J

Architect _____ Address _____

Contractor J. Milam Address 1829 - 102

Kind of Building _____

Foundation _____

Permit <u>3496</u>
Date <u>7/14/36</u>
District <u>100</u>

Posts	Girder		Span		Mud Sills	
	1st Floor	2nd Floor	3rd Floor	4th Floor	5th Floor	6th Floor
Joints						
Max. Span	<u>13' 0" Same Joists</u>					
Bearing Partitions						
Non Bearing Partitions						
Story Height	<u>9' 0" Same Joists</u>					
Outside Walls						
Celling Joists			Span			
Roof			Rafters			
Water Heater			Chimney			
Size of Building—Length			Width		Height	

It is hereby agreed that this building will be constructed in conformity with the Ordinances of the City of Sacramento and the Laws of the State of California.

ESTIMATED COST, \$ 1000

Plans must be submitted

J. Milam
Owner or Owner's Representative.

As you can see from the above, we are looking at a range of possible scenarios for the future of the world's population. The most likely scenario is that the world's population will continue to grow, reaching a peak of around 10 billion in the late 21st century before declining.

There are a number of factors that could influence the world's population in the future. One of the most important is the rate of population growth. If the rate of population growth continues to rise, the world's population could reach a peak of over 15 billion in the late 21st century. However, if the rate of population growth falls, the world's population could reach a peak of around 8 billion in the late 21st century.

Another factor that could influence the world's population is the rate of migration. If the rate of migration continues to rise, the world's population could reach a peak of over 15 billion in the late 21st century. However, if the rate of migration falls, the world's population could reach a peak of around 8 billion in the late 21st century.

Finally, there are a number of other factors that could influence the world's population, such as changes in life expectancy and the death rate. If life expectancy continues to rise, the world's population could reach a peak of over 15 billion in the late 21st century. However, if life expectancy falls, the world's population could reach a peak of around 8 billion in the late 21st century.

Overall, the most likely scenario is that the world's population will continue to grow, reaching a peak of around 10 billion in the late 21st century before declining. However, there are a number of factors that could influence the world's population in the future, and the actual outcome could be very different from the most likely scenario.

One of the most important factors that could influence the world's population in the future is the rate of population growth. If the rate of population growth continues to rise, the world's population could reach a peak of over 15 billion in the late 21st century. However, if the rate of population growth falls, the world's population could reach a peak of around 8 billion in the late 21st century.

Another factor that could influence the world's population is the rate of migration. If the rate of migration continues to rise, the world's population could reach a peak of over 15 billion in the late 21st century. However, if the rate of migration falls, the world's population could reach a peak of around 8 billion in the late 21st century.

Finally, there are a number of other factors that could influence the world's population, such as changes in life expectancy and the death rate. If life expectancy continues to rise, the world's population could reach a peak of over 15 billion in the late 21st century. However, if life expectancy falls, the world's population could reach a peak of around 8 billion in the late 21st century.
